

# Oracle Java Magazine – March/April 2015

Welcome to the **March/April 2015** issue of **##java Magazine**! In this issue, we examine how developers can improve Java performance—from code **#development** to platform tuning. Plus, find out how Netflix uses Java to fulfill 2 billion content requests per day.

## **Improving the Observability of Fork/Join Operations**

When adding parallelism might help performance

## **On Demand**

Netflix moves fast to give customers a superior viewing experience. Java makes it happen.

## **Performance, Innovation, and Success**

Find out how collaboration drives a healthier Java ecosystem.

## **Understanding Java JIT Compilation with JITWatch**

See the effects of small source code changes and Java HotSpot VM switches.

## **The Quantum Physics of Java**

Discover how modern chip design affects Java programs.

## **Improving the Performance of Java EE Applications**

Incorporate performance tuning into your development lifecycle.

And more!
